

## Evaluating Feed Types: Before and After Grazing

- 1) A cross section has been supplied for a lucerne crop (Box A), a swede crop (Box B) and a pasture mix (Box C - ryegrass, clover and plantain). Use the information on the relevant Feed Cards to discuss what the paddock could look like after grazing and the environmental impacts (positive and negative).
- 2) In the blank boxes next to the plants draw a picture of what it would look like after grazing and annotate with the environmental impacts.
